

# MarsX SLIM CABINET

Nomination for Supplier Innovation

Across Asia, gaming is the financial engine room for any integrated resort, casino or club - and today there's more desire to maximise floor space for financial, regulatory, hygiene or design purposes. This is why we built MarsX Slim. It's a cabinet with – as the name suggests – a very slim footprint with powerful technology that gives you more. We're thrilled to put forward our nomination for **Best Supplier Innovation** – highlighting our MarsX Slim cabinet and how it is helping operators transform their casino floor.

## Ingenious Design

There's no compromise on power, graphics and content – the MarsX Slim ingeniously packs in the same advanced technology, displays and sound output as the 'regular sized' MarsX cabinet

## Same Great Games

Full access to all the recent market leading game library as the regular MarsX cabinet - and all future content

## Less footprint = More floor

In our modeling, when we compared a gaming floor design with 100 + regular sized machines vs the MarsX Slim, it achieved a 15% increase in machines without compromising the space

## Maximising Floorspace Without Compromising the Player Experience

“MarsX Slim cabinet is the hardware solution we developed to address the challenge of limited floor space experienced by our partners across Asia. We eliminated this pain point by maximizing space on the gaming floor for operators without compromising the game play experience for players.

We have successfully completed our first MarsX Slim installation in Asia, addressing our partner's issue of a lack of space and a demand for more machines. The MarsX Slim footprint can enable up to 18% more machines to be positioned on gaming floors, satisfying player demand and better utilizing limited floorspace.

We continue our investment in hardware and software development to resolve different challenges for our business partners across Asia.” Lloyd Robson – General Manager, Aristocrat Gaming Asia
