

## Reimagining the Casino Experience and Beyond

Walker Digital Table Systems' (WDTs) Perfect Pay™ platform is the only system that uniquely identifies and verifies every casino chip across all locations. This provides unmatched visibility into player behavior, value, and floor performance. Through advanced UUID-level RFID chip tracking, WDTs delivers operator control and innovation that goes far beyond traditional player tracking systems.

This proprietary capability enables precise chip movement monitoring from table to cage, forming the backbone for next-generation casino operations. It supports everything from customer experience innovation to AI-driven analytics, making it an indispensable component of integrated resort infrastructure.

## Innovations in Table Games

Backed by extensive intellectual property, including foundational patents in RFID, optical, and facial recognition technology, Perfect Pay offers industry-exclusive features.

### Chip Ownership

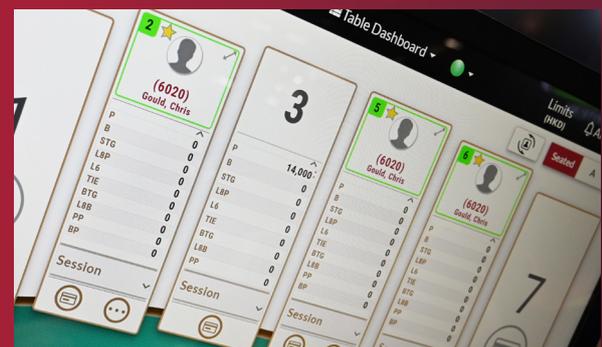

Each chip is assigned to a specific owner, which can be the casino or the player. This capability allows for:

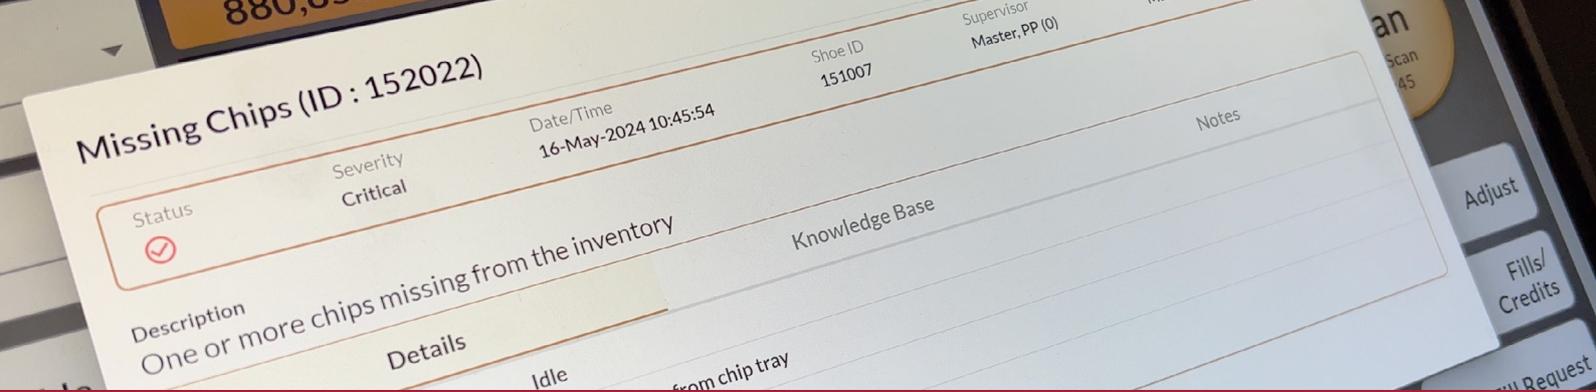

- ◆ **Seamless Player Recognition** without repeated identification checks or card swipes
- ◆ **Anonymous Player Insights** through unique bankroll IDs that help identify high-value unrated players
- ◆ **Fraud Prevention** by detecting chip transfers, also known as passing, between players on different rebate levels
- ◆ **Exceptional Guest Service** through the return of lost chips to their rightful owners
- ◆ **Accurate AML Reporting** with precise tracking of chip purchases, play activity, and losses

### Chip Enforcer

By pairing PJM3.0™ RFID technology with a secure, encrypted chip database, Chip Enforcer ensures currency security:

- ◆ **Real-time counterfeit prevention**
- ◆ **Instant flagging of unauthorized transactions, dealer errors, or theft**
- ◆ **Ability to disable stolen, missing, or suspicious chips**

## Fraud Detection

Perfect Pay automates detection of advantage play through:

- ◆ Real-time blackjack decision tracking to assess player skill
- ◆ Detection of baccarat side bet counting scams
- ◆ AI-driven win/loss variance analysis to highlight abnormal play

## AI and Machine Learning Integration

The Perfect Pay platform transforms raw chip and transaction data into real-time, actionable intelligence. An AI Player Scorecard predicts player value, risk, and potential fraud after as few as fifteen hands, reducing reliance on manual review.

AI Player Networks uncover hidden relationships by analyzing chip-passing patterns. This capability strengthens marketing opportunities, prevents overstated losses, and flags potential scams.

AI Predictive Fills and Credits optimize chip replenishment by learning from occupancy, play speed, and float levels. This not only streamlines operations but also improves security by recommending the most efficient replenishment path.

Computer Vision Patron Linking applies facial recognition to connect anonymous buy-ins with player profiles. This supports AML compliance, enhances player development, and detects mismatched chip usage.

Finally, Playing Card AI automatically recognizes blackjack splits, doubles, and payouts. By combining this with chip tracking, the system enables Perfect Payouts and Player Ratings across any card games.

## Elevating the Guest Experience and Business Impact

WDTS enhances the casino floor with innovations that improve both player engagement and operator performance. Mid-game baccarat wagers, powered by live card and chip data, let players adjust bets after the first four cards, creating excitement while increasing the house advantage. Unlike traditional tables, Perfect Pay keeps the game moving at full pace, increasing both volume and satisfaction.

Beyond guest enjoyment, these features deliver measurable business value. Real-time chip tracking and AI maximize operational insight, strengthen fraud prevention, and improve marketing precision by identifying opportunities with both rated and anonymous players. By introducing new wager types and optimizing table operations, WDTS increases revenue while ensuring a secure, efficient, and seamless casino experience.
